

**LINEAR HALL-EFFECT IC****AH49E****General Description**

The AH49E is a small, versatile linear Hall-effect device that is operated by the magnetic field from a permanent magnet or an electromagnet. The output voltage is set by the supply voltage and varies in proportion to the strength of the magnetic field.

The integrated circuitry features low noise output, which makes it unnecessary to use external filtering. It also includes precision resistors to provide increased temperature stability and accuracy. The operating temperature range of these linear Hall sensors is -40°C to 85°C, appropriate for commercial, consumer and industrial applications.

The AH49E is available in standard TO-92S package.

**Features**

- Miniature Construction
- Power Consumption of 3.5mA at V<sub>CC</sub>=5V for Energy Efficiency
- Single Current Sourcing Output
- Linear Output for Circuit Design Flexibility
- Low Noise Output Virtually Eliminates the Need for Filtering
- A Stable and Accurate Output
- Temperature Range of -40°C to 85°C
- Responds to Either Positive or Negative Gauss

**Applications**

- Current Sensing
- Motor Control
- Position Sensing
- Magnetic Code Reading
- Ferrous Metal Detector
- Vibration Sensing
- Liquid Level Sensing
- Weight Sensing

## Ordering Information

| Package | Temperature Range | Part Number |            | Marking ID |       | Packing Type |
|---------|-------------------|-------------|------------|------------|-------|--------------|
|         |                   | Lead Free   | Green      | Lead Free  | Green |              |
| TO-92S  | -40 to 85°C       | AH49EZ3-E1  | AH49EZ3-G1 | AH49E      | AH49G | Bulk         |

BCD Semiconductor's Pb-free products, as designated with "E1" suffix in the part number, are RoHS compliant. Products with "G1" suffix are available in green package.

**Absolute Maximum Ratings (Note 1)**

| Parameter                 | Symbol           | Value      | Unit |
|---------------------------|------------------|------------|------|
| Supply Voltage            | V <sub>CC</sub>  | 8          | V    |
| Output Current            | I <sub>O</sub>   | 10         | mA   |
| Operating Temperature     | T <sub>A</sub>   | -40 to 100 | °C   |
| Storage Temperature Range | T <sub>STG</sub> | -50 to 150 | °C   |
| ESD (Human Body Model)    |                  | 3000       | V    |

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

**Recommended Operating Conditions**

| Parameter             | Symbol          | Min | Max | Unit |
|-----------------------|-----------------|-----|-----|------|
| Supply Voltage        | V <sub>CC</sub> | 3.0 | 6.5 | V    |
| Operating Temperature | T <sub>OP</sub> | -40 | 85  | °C   |

| Output Voltage Sensitivity |                   | B=0GS to ±1000GS | 1.1                           | 1.6                           | 2.1  | mV/GS |
| Output Voltage Span        | V <sub>OS</sub>   |                  | 1.0 to (V <sub>CC</sub> -1.0) | 0.8 to (V <sub>CC</sub> -0.8) |      | V     |
| Output Resistor            | R <sub>O</sub>    |                  |                               | 60                            | 120  | Ω     |
| Magnetic Field Range       | B                 |                  | ±650                          | ±1000                         |      | GS    |
| Linearity of Span          |                   |                  |                               | 0.7                           |      | %     |
| Output Noise               |                   | BW=10Hz to 10kHz |                               | 90                            |      | μV    |

**Transfer Characteristics (V<sub>CC</sub>=5V)**

When there is no outside magnetic field (B=0GS), the quiescent output voltage is one-half the supply voltage in general. If a south magnetic pole approaches to the front face (the side with marking ID) of the Hall-effect sensor, the circuit will drive the output voltage higher. Contrary, a north magnetic pole will drive the output voltage lower. The variations of voltage level up or down are symmetrical.

Greatest magnetic sensitivity is obtained with a supply voltage of 6V, but at the cost of increased supply current and a slight loss of output symmetry. So, it is not recommended to work in such condition unless the output voltage magnitude is a main issue. The output signal can be capacitively coupled to an amplifier for boosting further if the changing frequency of the magnetic field is high.
